

Villa Upper Floor — Terrace 2

— Japanese Garden

Spa/Jacuzzi — AI Design Prompt

Photorealistic architectural visualization of a Japanese-garden-inspired spa terrace, designed for tranquility and relaxation.

Layout & Space Planning

- Terrace dimensions: 3.20m x 6.85m — a long, narrow space; design as a sequential journey from one end to the other rather than a single open zone.
- Divide the terrace into two connected zones along its length:
 - **Spa/jacuzzi zone:** a built-in jacuzzi (round or softly rounded rectangular, sized to comfortably fit 2–4 people) set into a raised timber or stone deck platform, positioned toward one end of the terrace for privacy.

- **Tanning/sun lounge zone:** 2 sun loungers positioned along the remaining length, angled to maximize both sun exposure and available floor width — consider a slightly recessed or stepped-down deck level to distinguish it from the spa zone while keeping an open, uninterrupted feel.
- Optimize space tightly given the narrow footprint: use built-in bench seating/steps around the jacuzzi that double as plant ledges or storage, and keep circulation paths at a minimum comfortable width (0.8–1.0m) rather than wasting space on open walkways.
- A low timber or stone screen/divider (partial height, not fully enclosing) can softly separate the jacuzzi zone from the lounging zone while preserving garden sightlines through it.

Materials

- **Decking:** natural warm-toned wood decking (teak or thermally-treated timber) as the primary floor material, laid in clean linear boards to visually elongate the narrow space.
- **Stones:** smooth river stones and larger flat natural stone slabs used as accents — stepping-stone paths, stone edging around the jacuzzi, and a small stone water feature or

basin (tsukubai-style) if space allows near the entry.

- **Planting:** curated Japanese garden planting — bamboo (clumping, non-invasive varieties) for vertical screening/privacy, Japanese maple or dwarf pine as a feature tree, moss or low ground-cover planting between stones, all in built-in planters to maximize the tight floor space.
- **Jacuzzi surround:** natural stone or wood cladding on the jacuzzi shell to blend it into the timber deck rather than reading as a standalone tub.

Lighting

- Soft stone lanterns (Japanese toro-style, in-ground or low profile) placed along the stepping path and near planting for gentle ambient glow.
- Warm underwater/waterline lighting in the jacuzzi for evening use.
- Subtle uplighting on the feature tree/bamboo to cast natural shadow patterns on the timber decking and travertine-style walls.
- Low, warm lighting overall (2700K) to keep the mood calm, private, and spa-like rather than bright or clinical.

Style & Mood

- Serene, minimalist Japanese zen garden aesthetic — natural materials, asymmetry, negative space (ma), and a sense of calm privacy.
- Should feel like a private wellness retreat within the villa — quiet, textured, and sensory (sound of water, natural textures underfoot).
- Materials and warm tones should still feel connected to the villa's overall palette (natural wood, stone, warm neutrals) without directly matching the pool terrace's microcement/travertine finish — this space reads as a deliberate contrast/retreat.

Camera Angle

- Elongated view down the length of the terrace from the entry point, showing the stepping-stone path leading past the planting toward the jacuzzi, with the sun loungers visible to the side — daytime shot to emphasize natural light through bamboo, with a second dusk option showing the lantern and jacuzzi lighting glowing softly.
